

PROFESSIONAL SUMMARY

Backend Engineer with 3+ years of experience designing and delivering high-performance, high-availability microservices in **Java and Kotlin** on Spring Boot for large-scale enterprise platforms. Skilled at modelling complex, highly connected data and optimising queries — including **graph data modelling with Neo4j and Cypher** alongside Oracle/PostgreSQL. Proven ability to own end-to-end SDLC from technical design through delivery, production support, and performance tuning. Deep expertise in RESTful APIs, event-driven architectures (Kafka, RabbitMQ), and containerised deployments on Kubernetes/OpenShift. Strong **system design and architectural reasoning**, with a track record of solving complex, high-scale problems and communicating technical concepts clearly across teams.

TECHNICAL SKILLS

Languages	Kotlin, Java 17, J2EE, SQL, Cypher (Neo4j), JavaScript, TypeScript, Bash
Backend & Frameworks	Spring Boot 3, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate/JPA, Spring Batch, Spring Cloud, Spring WebFlux, RxJava, Project Reactor
Graph & Databases	Neo4j (Cypher, graph data modelling, query optimisation, indexing), Oracle, PostgreSQL, MySQL, MongoDB, Redis (TTL caching), JPA/Hibernate ORM, HikariCP pooling
API & Integration	RESTful Web Services, GraphQL, Solace, SOAP, Apache Camel, Spring Integration, JMS
Messaging & Async	Apache Kafka, RabbitMQ, Event-Driven Architecture, Async Processing, Message Queues
Build, Test & Quality	Maven, Gradle, JUnit 5, Mockito, TestNG, TDD, Integration & Performance Testing, SonarQube, Code Review
Containers & Cloud	Kubernetes, OpenShift, Docker, Helm, Terraform, Ansible, Jenkins, GitLab CI, AWS (EC2, S3, RDS, Lambda), Azure, GCP
Frontend (Desirable)	Angular 2+ (RxJS, NgRx, Angular Material), React.js (Hooks, Redux), HTML5, CSS3, SASS
Tools & Practices	Git, Bitbucket, JIRA, IntelliJ IDEA, Postman, Agile/Scrum, System Design, Grafana, Splunk, Tomcat, JBoss/WildFly

WORK EXPERIENCE

Software Development Engineer

Jan 2023 — Present

Jio Platforms Limited — Navi Mumbai, India

- **E-Commerce Return Management Platform (JioMart):** Designed and developed high-performance RESTful APIs for JioMart's return lifecycle using Spring Boot (Java/Kotlin), processing millions of transactions with sub-50ms response times via Redis TTL caching and Oracle/PostgreSQL persistence. Acted as SME for production incidents, resolving critical problem tickets and minimising SLA breaches. Owned SDLC phases including requirements, technical design, test strategy, and performance benchmarking. Deployed on Kubernetes/AWS via Jenkins CI/CD with zero-downtime rolling updates.
- **Graph Data Modelling & Neo4j:** Modelled highly connected returns data — customers, orders, items, refunds, and return reasons — as a property graph in **Neo4j**; authored and optimised **Cypher** queries for multi-hop traversals powering return-reason analytics and duplicate/fraudulent-return detection that were expensive as relational joins. Tuned node indexes and query plans for scalability across millions of relationships.
- **Compliance Microservice (RPOS/ROMS):** Architected a Spring Boot (Kotlin/Java) message-oriented microservice automating GSTIN validation, IRN generation, and E-way bill creation — reducing manual processing by 40%. Leveraged Apache Kafka and RabbitMQ for async, fault-tolerant event processing at scale. Owned end-to-end SDLC including feasibility studies, cost/time estimations, test design, performance benchmarking, and release/rollback plans. Deployed on OpenShift with Terraform-managed infrastructure.
- **Device Validation & API Service (Campus Picking):** Built a high-availability Spring Boot REST microservice for real-time device IMEI validation using Bean Validation DTOs, @ControllerAdvice exception handling, retry logic, and comprehensive audit logging. Defined system architecture and design patterns; participated in requirements, design, and code reviews. Conducted brown-bag sessions on REST design patterns for the team.
- **Security Framework (Project Pentagon):** Hardened authentication services using Spring Security, OAuth2, and JWT-based RBAC across 10+ microservices. Implemented token refresh flows and route guards in Angular/React frontends. Performed security reviews and code inspections ensuring full compliance with enterprise security best practices across all service boundaries.

Production Engineer

Oct 2017 — Jan 2019

Essel Propack Ltd.

(+91) 9064563812

V Sai Purandhara

Senior Backend Engineer | Java & Kotlin

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

- Supported production operations using SAP in a large-scale FMCG manufacturing environment; assisted in issue tracking, escalation, and technical documentation.

PROJECTS

JioMart Return Management Platform — *Java, Kotlin, Spring Boot, Neo4j, Oracle, PostgreSQL, Redis, Kubernetes, Jenkins, AWS*

- Built and maintained high-performance RESTful and GraphQL APIs for return lifecycle management, applying Redis TTL caching for sub-50ms latency and Oracle/PostgreSQL for transactional storage at scale.
- Modelled return-order-customer-refund relationships in Neo4j and optimised Cypher traversals for analytics and fraud-pattern detection; owned end-to-end delivery with zero-downtime Kubernetes deployment on AWS and release/rollback plans.

Graph-Backed Recommendation Service (Personal) — *Kotlin, Neo4j, Cypher, Spring Boot, Docker*

- Built a Spring Boot + Kotlin service backed by Neo4j that models users, products, and interactions as a property graph; implemented Cypher queries for recommendation traversals and shortest-path lookups, with indexes and query profiling (EXPLAIN/PROFILE) tuned for performance.

Compliance Automation Service (RPOS/ROMS) — *Java, Kotlin, Spring Boot, Kafka, RabbitMQ, OpenShift, Terraform, Jenkins*

- Automated GSTIN, IRN, and E-way bill workflows via external GST APIs; message-oriented architecture using Kafka and RabbitMQ for async, fault-tolerant processing at scale — cutting manual effort by 40%.
- Led feasibility studies, cost/time analysis, and estimations; managed Terraform-based OpenShift deployments and built an Angular ops dashboard with real-time SLA indicators.

EDUCATION

The Institution of Engineers (India)

Jan 2019 — July 2022

Bachelor of Engineering (Mechanical) · CGPA: 8.67

Technique Polytechnic Institute

June 2014 — Nov 2017

Diploma in Engineering · Score: 82.3%

CERTIFICATIONS

Full Stack Java Developer Master's Program — Simplilearn

Nov 2022 — Jan 2023
