

PROFESSIONAL SUMMARY

Java Backend Engineer with 3+ years of experience delivering high-performance, high-availability J2EE/Spring Boot microservices and REST APIs for large-scale enterprise platforms. Built rule-driven, compliance-heavy services (GST decisioning, validation workflows) and complemented Java with Python/Pandas for data processing — with hands-on interest in decisioning platforms such as FICO Decision Management and Blaze Advisor. Proven ability to own end-to-end SDLC from requirements and technical design through delivery, production support, and continuous improvement. Deep expertise in RESTful microservices, message-oriented architectures (Kafka, RabbitMQ), Oracle/SQL databases, and CI/CD-driven, containerised deployments on Kubernetes and OpenShift. Experienced in Agile/Scrum, code reviews, performance benchmarking, and mentoring team members.

TECHNICAL SKILLS

Core Java & Backend	Java 17, J2EE, Spring Boot 3, Spring Framework, Spring MVC, Multithreading, Spring Security, Spring Data JPA, Hibernate/JPA, Spring Batch, Spring Cloud, Spring WebFlux, RxJava, GoLang
Decisioning & Rules	Business Rules Engines (Drools), Decision Tables, Rule-Driven Workflows, FICO Decision Management & Blaze Advisor (upskilling)
Python Backend API & Integration	Python 3, Pandas, NumPy, Flask REST APIs, Batch Data Pipelines RESTful Web Services, Microservices Architecture, GraphQL, Solace, SOAP, Apache Camel, Spring Integration, JMS
Messaging & Async	Apache Kafka, RabbitMQ, Event-Driven Architecture, Async Processing, Message Queues, Spring Batch
Build, Test & Quality	Maven, Gradle, JUnit 5, Mockito, TestNG, TDD, Integration Testing, Performance Testing, SonarQube, Code Review
Databases	Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB, Redis (TTL caching), JPA/Hibernate ORM, SQL Scripting, HikariCP Connection Pooling
Containers, Cloud & CI/CD	Kubernetes (k8s), OpenShift, Docker, Helm, Jenkins, GitLab CI, AWS (EC2, S3, RDS, Lambda), Microsoft Azure, GCP, API Gateway
Frontend (Desirable)	Angular 2+ (RxJS, NgRx, Angular Material), React.js (Hooks, Redux), HTML5, CSS3, TypeScript, ES5/ES6, SASS
Languages & Tools	Java, Python, JavaScript, TypeScript, Bash, SQL Git, Bitbucket, JIRA, IntelliJ IDEA, Postman, Agile/Scrum, Grafana, Splunk, OpenAPI

WORK EXPERIENCE

Software Development Engineer <i>Jio Platforms Limited</i>	Feb 2023 — Present <i>Navi Mumbai, India</i>
E-Commerce Return Management Platform (JioMart): Designed and developed high-performance RESTful APIs for JioMart's return lifecycle using Spring Boot, processing millions of transactions with sub-50ms response times via Redis TTL caching and Oracle/PostgreSQL persistence. Acted as SME for production incidents, resolving critical problem tickets and minimising SLA breaches. Owned SDLC phases including requirements, technical design, test strategy, and performance benchmarking. Deployed on Kubernetes/AWS via Jenkins CI/CD with zero-downtime rolling updates. Compliance & Decisioning Microservice (RPOS/ROMS): Architected a Spring Boot message-oriented microservice automating rule-based GSTIN validation, IRN generation, and E-way bill decisioning — reducing manual processing by 40%. Encoded tax/compliance business rules as configurable decision logic and leveraged Apache Kafka and RabbitMQ for async, fault-tolerant event processing at scale. Owned end-to-end SDLC including feasibility studies, estimations, test design, performance benchmarking, and release/rollback plans. Deployed on OpenShift with Terraform-managed infrastructure. Device Validation & API Service (Campus Picking): Built a high-availability Spring Boot REST microservice for real-time device IMEI validation using Bean Validation DTOs, @ControllerAdvice exception handling, retry logic, and comprehensive audit logging. Defined system architecture and design patterns; participated in requirements, design, and code reviews to ensure reliability and security compliance. Conducted brown bag sessions on REST design patterns for the team. Security Framework (Project Pentagon): Hardened authentication services using Spring Security, OAuth2, and JWT-based RBAC across 10+ microservices. Implemented token refresh flows and route guards in Angular/React frontends. Performed security reviews and code inspections ensuring full compliance with enterprise security best practices across all service boundaries. Distributed Systems & Observability: Configured Apache Kafka producers/consumers for real-time, fault-tolerant event streaming across retail services. Established centralised logging, alerting, and SRE observability practices to reduce incident MTTD and improve operational excellence. Mentored junior engineers on distributed systems, Agile methodologies, and SDLC best practices.	
Content Reviewer <i>TechFirefly Pvt. Ltd.</i>	Oct 2022 — Feb 2023
Reviewed and validated digital content for accuracy, quality, and adherence to client guidelines, maintaining consistency and high data integrity across large review volumes.

Production Engineer

Oct 2017 — Jan 2019

Essel Propack Ltd.

- Supported production operations using SAP in a large-scale FMCG manufacturing environment; assisted in issue tracking, escalation, and technical documentation.

PROJECTS

JioMart Return Management Platform — Java, Spring Boot, Oracle, PostgreSQL, Redis, Kubernetes, Jenkins, AWS

- Built and maintained high-performance RESTful and GraphQL APIs for return lifecycle management, applying Redis TTL caching for sub-50ms latency and Oracle/PostgreSQL for transactional storage at scale.
- Owned end-to-end delivery: requirements, technical design, test strategy, performance benchmarking, and zero-downtime Kubernetes deployment on AWS with release/rollback plans.

Compliance Automation Service (RPOS/ROMS) — Java, Spring Boot, Kafka, RabbitMQ, OpenShift, Terraform, Jenkins

- Automated GSTIN, IRN, and E-way bill workflows via external GST APIs; message-oriented architecture using Kafka and RabbitMQ for async, fault-tolerant processing at scale — cutting manual effort by 40%.
- Led feasibility studies, cost/time analysis, and estimations; managed Terraform-based OpenShift deployments and built an Angular ops dashboard with real-time SLA indicators.

Rule-Based Decisioning Engine — Python, Pandas, NumPy, Flask

- Built a Pandas-based batch decisioning engine that scores transaction/applicant records against configurable business rules (thresholds, risk flags), vectorised for high-throughput evaluation over large datasets.
- Exposed decisions via a lightweight Flask REST API, mirroring rule-driven decisioning platforms such as FICO DM / Blaze Advisor.

EDUCATION

The Institution of Engineers (India)

Jan 2019 — July 2022

Bachelor of Engineering (Mechanical)

CGPA: 8.67

Technique Polytechnic Institute

June 2014 — Nov 2017

Diploma in Engineering

Score: 82.3%

CERTIFICATIONS

Simplilearn

Feb 2022 — Aug 2022

Full Stack Java Developer Master's Program
